

# Datafor<sup>®</sup>

---

## data visualization and analysis

# Agenda

✓ Overview

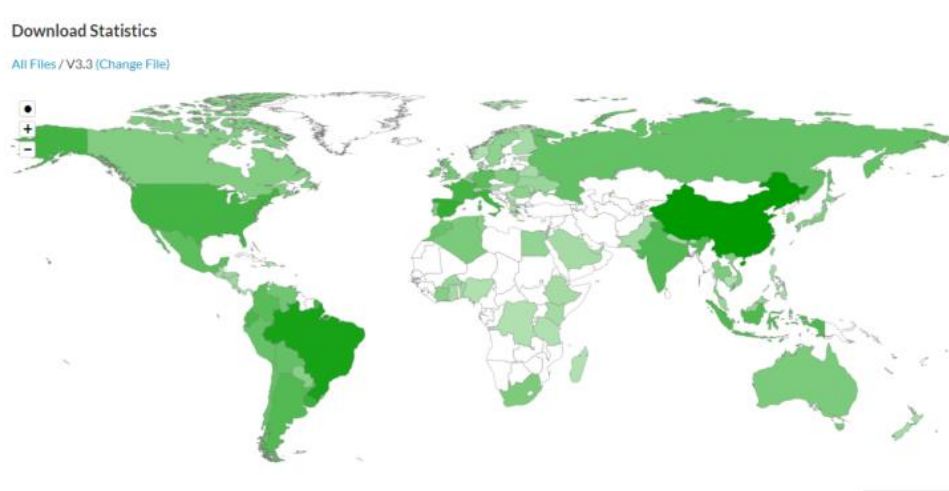

□ Features

**Datafor** is a self-service BI tool that offers intuitive data visualization and analysis, empowering users to explore, analyze, and make informed decisions efficiently.

- ✓ Powerful analytics for various data types.
- ✓ Easy-to-use reports and dashboards.
- ✓ Self-service analytics for non-tech users.
- ✓ Real-time monitoring of business operations.
- ✓ Mobile access for data-driven decisions.
- ✓ Seamless integration with other applications.

used by users from more than 56 countries

# Total analytic and visualization solution

## Access data

## Prepare data

- visual modelling
- star/snowflake schema
- data dictionary
- calculated formula
- grouping and aggregation
- role-based data visibility
- MDX support

## Analyze and Visualize data

- Exploratory analysis
- 100+ visual components
- Dashboard, analysis, map, report, 3d model
- drill down, roll up, slicing, filtering, drill-through
- auto-refresh

## Share insights

- responsive design
- automatically adapt to all devices
- export image/excel/csv/pdf
- mail subscription
- hyperlink for sharing
- iframe/div embed
- wechat/dingding support

# The architecture

# Comprehensive data source access

## Big Data Platform

SAP HANA

SparkSQL

Impala

## Multidimensional Database

Kylin

SAP BW

SSAS

## Relational Database

Oracle

DB2

MySQL

SQLServer

PostgreSQL

Sybase

TiDB

.....

## NoSQL Database

MongoDB

## File

CSV/TXT

Excel

## Cloud Database/Data Warehouse

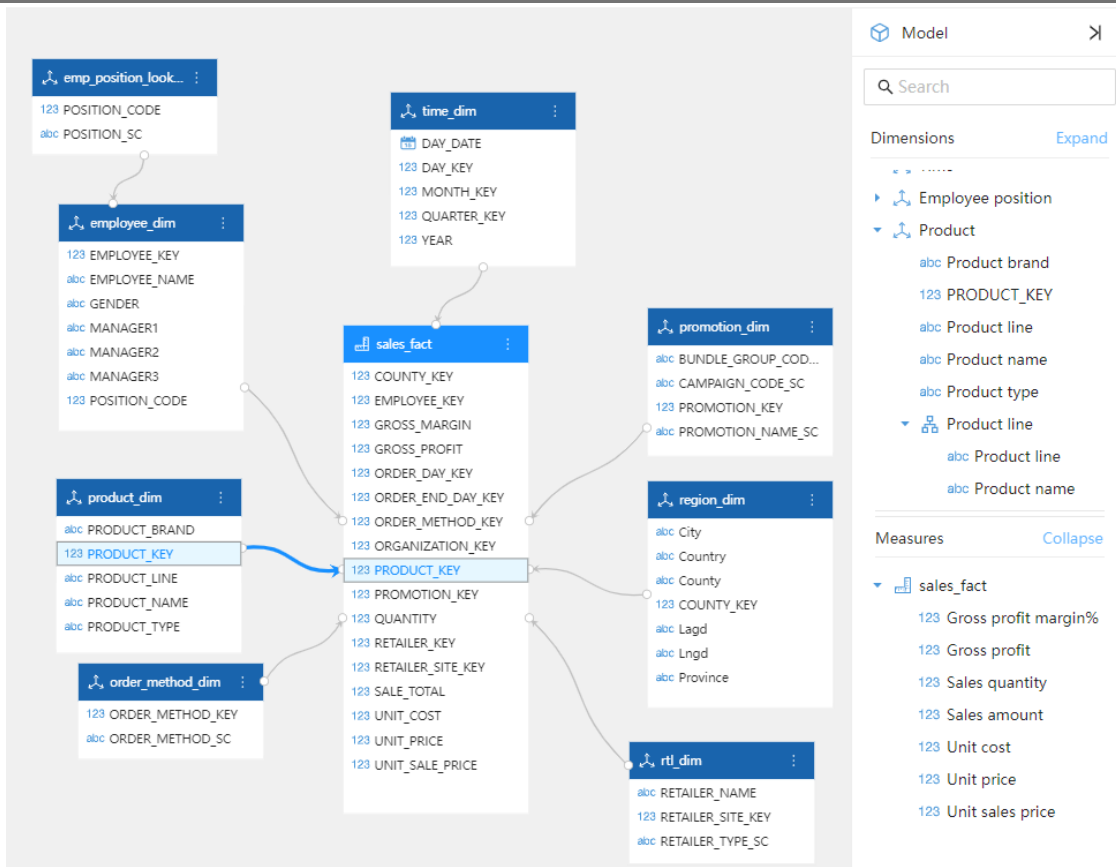

Snowflake

Redshift

# Effortless intuitive modeling

- Create multi-dimensional models in a few clicks
- Define columns and hierarchies in business terms
- Support complicated models (star, snowflake, multiple fact tables)
- Support member formatting, calculated columns, and calculated metrics
- Off-the-shelf formulas to create complex measures

- Multi-dimensional data visualization.
- Summarizes data dynamically, including totals, averages, percentages, and more.
- Wide range of formatting choices, including text styles, colors, data bars, and more.
- Interacts with other visualization components. Filtering, sorting, and drilling down operations within the pivot table.
- Sub-second rendering and smooth interactions with millions of data rows
- Exports to Excel and csv files

# Easy-to-extend Visualization Components

## Component.js

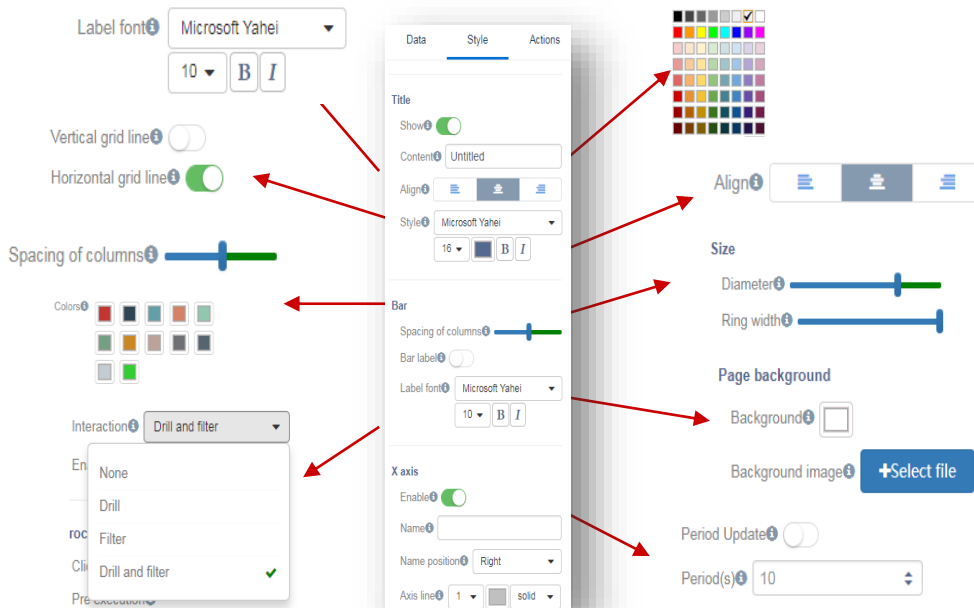

- **Flexibility:** Introduce third-party chart libraries such as D3.js, Chart.js, etc., to meet more complex data visualization needs.
- **Specific Requirements:** Create customized visualization components based on specific business scenarios and requirements.
- **Scalability:** Update and expand custom visualization components as needed.

# Fully customizable visual components

- **Rich options:** Including color, font, size, spacing, labels, borders, etc.
- **Real-time effect:** Instantly preview the modified effects to intuitively understand the adjusted component style.
- **Dynamic styles:** Dynamically adjust styles based on different data conditions and analysis results.

# Adapt page layouts to different screen sizes

- **Adaptive layout:** Fits various sizes and orientations of mobile devices.
- **Mobile view editing:** Edit layouts and content directly within the mobile device view.
- **Real-time preview:** Instantly preview the effects on different devices during the design process.

# Exploratory Analysis

Drill-down

Drill-through

Pivot

Slice

Group

Sort

Calculate

Summarize

# Blend multiple sources for comprehensive analysis

- Data integration in reporting level
- Without loading data into centralized data warehouse
- Slicing/filtering across dimension tables from different sources
- No extra table creation
- No SQL knowledge required

# Complex measures without formula expertise

**New quick measure**

Search

- Basic calculation
- Comparable period value
- Period-over-period change rate
  - fx Year-over-year change rate**
  - fx Quarter-over-quarter change rate
  - fx Month-over-month change rate
  - fx Week-over-week change rate
  - fx Period-over-period change rate
- Calculated
- Aggregate per category

Name: Store sales YoY%

Time hierarchy: the\_date

Measure: store\_sales

Number of periods: 1

Format: 0.00% (32.00%)

**1. Choose**

**2. Configure**

**Edit Calculated Measure**

Caption: Store sales YoY%

Formula:

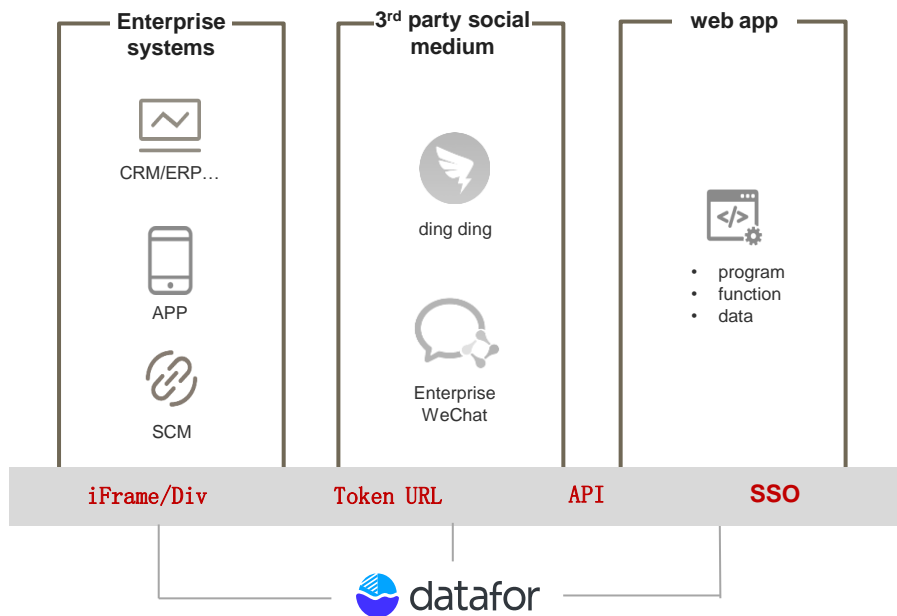

```
(  
  [Measures].[sales_fact_1997.store_sales]  
  /  
  Sum(  
    FilteredParallelPeriod([time_by_day].[AGG_the_date], -1, "yyyy"),  
    [Measures].[sales_fact_1997.store_sales]  
  )  
  -1  
)
```

Format: 0.00% (32.00%)

**3. Generate**

Cancel Update

# Embedded Analysis

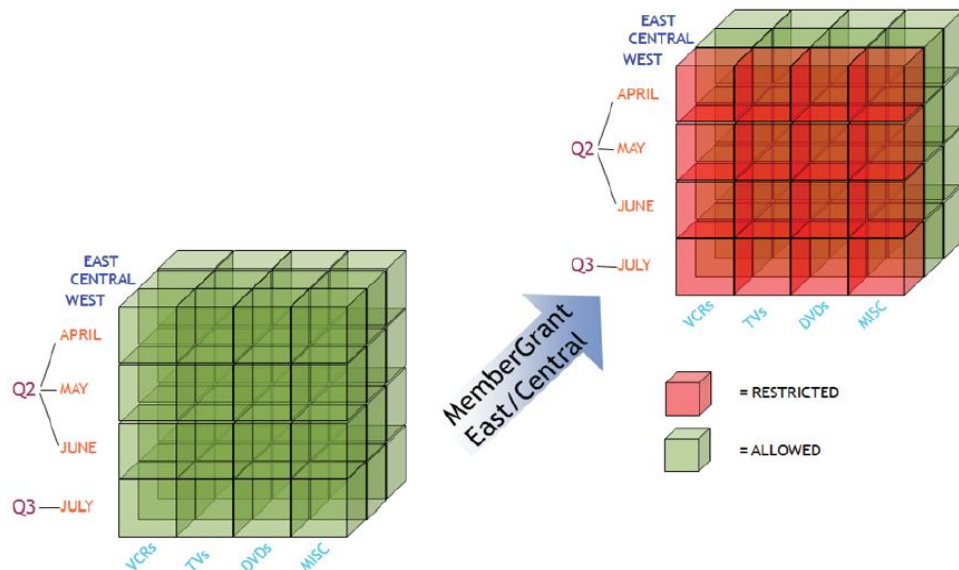

- **Embedding:** seamlessly integrate analytical capabilities into any application with iFrame/div, API, and SDK.
- **Fully customization:** ensure consistent appearance and layout.
- **Security:** multiple single sign-on solutions and JWT.
- **Cloud ready:** cloud deployment and hosting to reduce management costs and complexity.
- **Compatibility:** cross-platform compatibility, support Windows/Linux installation

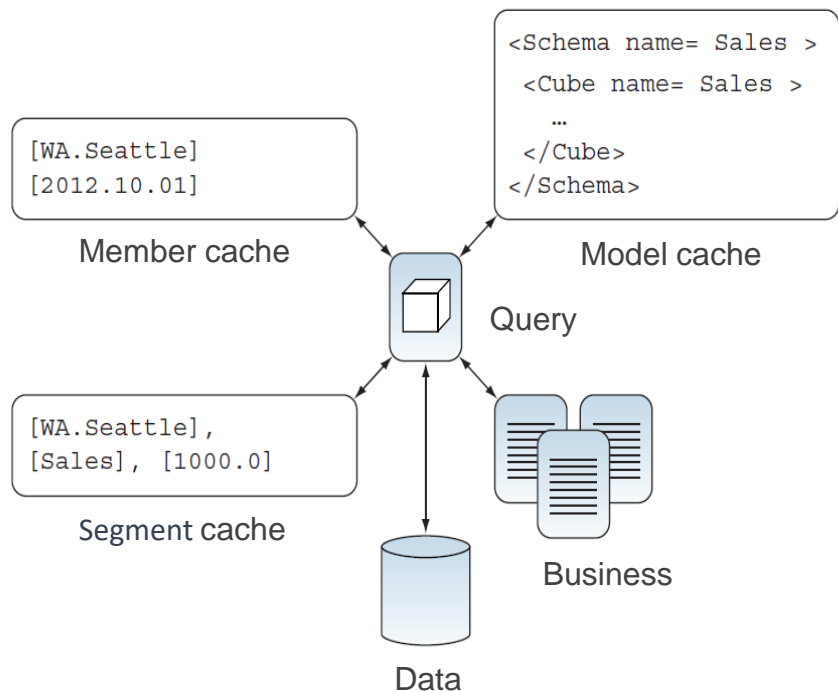

# Data visibility: role-based data access control

- **Model:** determine which models can be accessed/modified for each role.
- **Dimension:** controlled by table visibility for different roles
- **Level and measure:** controlled by column visibility for different roles
- **Member:** controlled by row visibility for different roles

# Pre-aggregation and cache to speed up performance

## Pre-aggregation:

- Automatically match and aggregate data based on queries to enhance query performance.

## Caching:

- **Schema cache**: keeps schemas in memory so that no re-read is required every time a cube is loaded.
- **Member cache**: stores member values in memory to reduce no. of reads from database
- **Segment cache**: stores previous calculated values in memory to reduce no. of re-read and re-calculations.

# Multi-talent architecture for SaaS applications

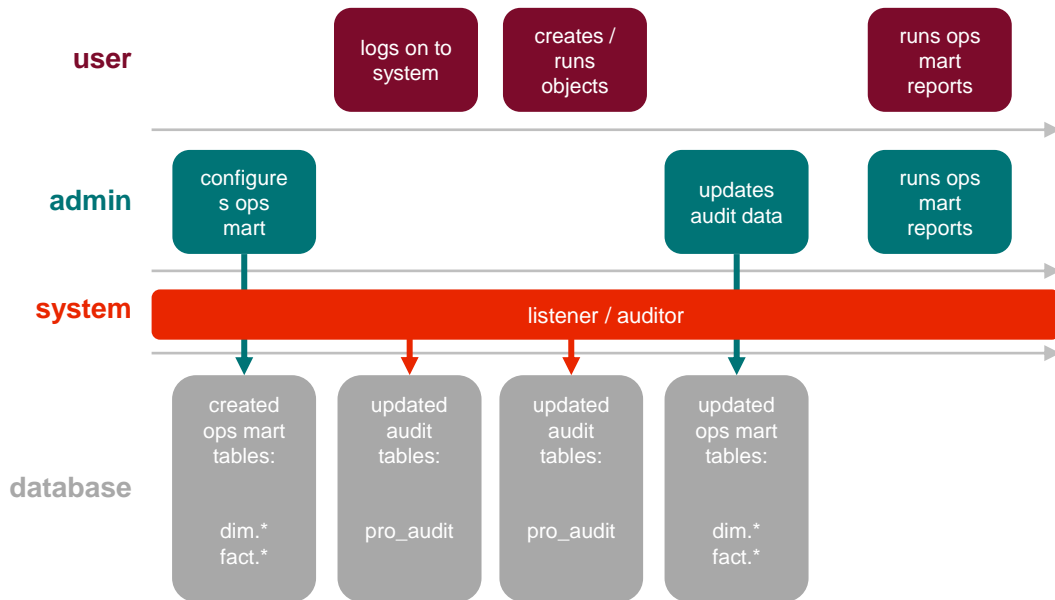

- Allow developers and integrators to apply custom security and business rules to control data access.
- Content separation between talents, including data sources, folder structures, and artifacts.
- Different user interface styles for each tenant.

# Comprehensive Logging and Audit

- Who has logged into the system?
- How many times have they logged in and how much time was spent?
- Which pages have been viewed?
- Which reports encountered errors?
- Which reports have the worst performance?
- Which reports are the most frequently used?
